

## Avoid performance bottlenecks with CA ARCserve® Backup

### Complete backup for your consolidated Virtual Environment

Virtualisation allows for efficient utilisation of Server capacity, simpler storage administration, reduced energy costs, and better use of your IT investments. CA ARCserve Backup provides complete protection to your virtualisation environment for VMs running on Windows Server Hyper-V, VMware ESX Server and VMware vCenter Server.

CA ARCserve Backup Agent for Virtual Machines also lets you protect VMware-based data residing on local storage and on a storage area network.

- » Supports VMs hosted on Windows 2008 Server Hyper-V environments
- » Multi-streaming for Hyper-V and VMware VCB backups
- » Reduces admin overhead by centralising backup management on Hyper-V host systems
- » Perform File-level restore from image-level backup on VMware-based systems
- » Perform mixed backups on Windows Server 2008 Hyper-V and VMware.

CA ARCserve Backup Agent for Virtual Machines protects both VMware ESX and Microsoft Windows Hyper-V Virtual Machines. Besides Raw mode and File mode backup, it provides Mixed Mode and Raw mode backups which allows file-level restores for recovering individual files from image-level backups.

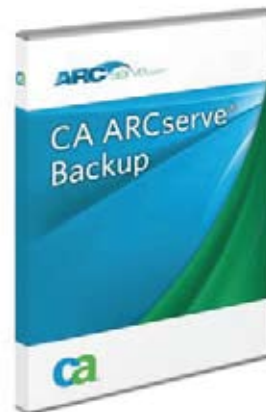

## CA Xtra Value Deal

With the CA ARCserve "Xtra Value Pack" Offer, CA combines the simplicity of CA ARCserve Backup Suites with the added benefits of CA XOSoft Replication.

Xtra Value Pack Includes:

- » **1 X CA ARCserve Backup Suite**, (Applications, Email, Database, File Server or Virtual Server suite)
- » **2 X CA XOSoft Replication Enterprise OS Option** (for Applications or File Server, as applicable)
- » **CA ARCserve Dashboard**
